

PAULISTANA EMPORIO - INFORMATION SECURITY & PRIVACY POLICY

1. Information Security Program

Paulistana Emporio maintains a strict security baseline for all daily operations. All endpoints utilize up-to-date Anti-Virus software and are required to implement screen-locking mechanisms and strict password complexity rules.

2. Network & Access Control

We enforce network segregation for our cloud database environments (Supabase/AWS) and monitor for external threats. Access to personal and sensitive data is strictly governed by the Principle of Least Privilege (PoLP). Only authorized personnel have access to the production databases.

3. Data Encryption

All sensitive data is encrypted both in-transit (via TLS/SSL/HTTPS) and at-rest (AES-256 encryption on Supabase/PostgreSQL databases). We maintain a clear data classification policy to identify and protect Personally Identifiable Information (PII).

4. Vulnerability & Incident Response

We maintain continuous monitoring of our infrastructure. In the event of a security incident, our Incident Response Policy mandates immediate isolation of the affected systems, mitigation of the threat, and notification of the relevant platforms (such as TikTok Shop) and affected users within 72 hours.

5. Data Deletion & Compliance

We are fully committed to assisting TikTok Shop and users with any data deletion, modification, or
